TECHNICAL INFORMATION

Catalog Number: 55125

Goat Antiserum To Human Fibronectin

DESCRIPTION: Product is the lyophilized powder of goat antiserum to human fibronectin and buffer salts.

The antiserum is prepared by hyperimmunizing goats with highly purified human fibronectin; antiserum is delipidated and made specific by solid-phase absorption. The resulting antiserum is dialyzed into 0.02M sodium phosphate, 0.14M sodium chloride, pH 7.3, adjusted to standard titer, filtered through a 0.22 μ m filter, vialled and lyophilized.

USES: This product is suitable for use as a precipitating antibody. It gives sharp precipitin lines in immunoelectrophoresis and immunodiffusion techniques.

(Note: IgG fractions are suitable for conjugation with enzymes, radiolabels, fluorochromes or other markers and for attachment to solid supports for use as an immunoabsorbant. F(ab')₂ fragments are recommended for staining of cells or tissues which contain Fc receptors. See **Related Product Ordering Information** for these products.)

SUGGESTED WORKING DILUTIONS:

1:50 - 1:200 for Tissue Staining
1:100 - 1:500 for Immunoblotting
1:400 - 1:2,000 for ELISA

It is recommended that each lab obtain their own optimal working dilution for each assay.

SPECIFICATIONS: The total protein is measured using the Biuret procedure, with bovine albumin as a standard. Antibody titer is standardized with an in-house control by immunoelectrophoresis. Each antiserum is tested for specificity at a minimum of 80 mg/ml using immunoelectrophoresis. It shows reactivity to human fibronectin; cross-reactivity to other species may exist. Antibody activity to human fibrinogen or other serum proteins is not present.

RECONSTITUTION: Reconstitute product with 2.0 ml of deionized or distilled water. Gentle swirling may be used to speed rehydration. Avoid vigorous shaking of the reconstituted material.
